CONCEPT: MONOMERS & POLYMERS

• **Monomers:** _____ individual building blocks that can be repetitively linked together to form polymers.

□ **Polymers:** long chains of _____ monomers linked together.

□ Monomers will _____ depending on the type of biomolecule polymer.

□ Carbohydrates, proteins, & nucleic acids use _____ monomers to form polymers, but _____ do NOT.

EXAMPLE: Monomers vs. Polymers.

Key

Carbohydrate	□ □ □	□	Monosaccharide
Protein	□ □ □	□	Amino acid
Nucleic Acid	□ □ □	□	Nucleotide

Is water technically a mixture of compounds or a compound? example oceans are mixtures of proper...

Reply

Jason Sumpter Pearson 1 day ago

Hey Jeffrey! If it was stated what kind of water it is (like tap water, sea water, etc.) then you can say that it is a homogenous mixture. When you are asked with just plain "H₂O" or "water", it's definitely a compound.
